

From your source of innovation and leadership...

Ardex is excited to announce the latest technology advances in odor elimination.

After many years successfully destroying odors in vehicles with our Vehicle Hygienist, we've developed the next generation. This new generation features an enhanced distribution vessel for even more effective odor killing.

This vessel has taken the lessons from all prior dispersion systems and tweaked them to the highest level.

With great effectiveness in odor elimination, the new dispensing vessel doesn't require damping a piece of sponge. This two part system is all included in the sealed container. Easier activation, better odor killing. Once the sealed container is opened, the system gets activated by combining the two part system included inside.

- Extended life for heavier odor control
 - This product does a great job in just one hour on light odors, however if there is a strong odor, it will keep working for up to four hours!
- Added security features include a spill resistant distribution vessel. The two-compartment vessel features a hole in the middle of the lower section. By having a small entry hole in the middle of the lower compartment, the likelihood of spillage is minimized... unless turned completely upside down!
- A static cling warning notice is also included in the kit. This notice is easily seen to prevent early entry into the vehicle. When the odor removal process is completed, the notice is easily removed. The notice even includes areas for marking the start and finish times for the odor removal to easily track the progress!
